

Dynamic Computing Services (DCS) Celebrates 35 Years of IT Consulting Excellence Nationwide

Austin, Texas – February 23, 2025 – Dynamic Computing Services (DCS), a nationwide leader in IT consulting, is proudly celebrating 35 years of delivering innovative solutions and building long-term partnerships with clients across the United States. Since its founding in 1990, DCS has consistently evolved alongside the ever-changing landscape of technology, always working to raise the bar and meet the unique needs of its diverse clientele.

Back when DCS first started, the world of IT consulting was very different. The company's early days were marked by writing COBOL programs, utilizing pagers, and issuing paper airline tickets for travel. Fast forward to today, and DCS has embraced cutting-edge technologies such as LinkedIn, smartphones, and artificial intelligence (AI) to help clients navigate and thrive in an increasingly complex digital world.

“Looking back over the past 35 years, it’s incredible to see how far technology has come—and how far we’ve come alongside it,” said Gary Sherrell, Founder of Dynamic Computing Services. “What hasn’t changed is our core commitment to treating both the company and the consultant as clients. That simple philosophy has been at the heart of our success since 1990 and remains a guiding principle for how we operate today.”

At the core of DCS's success is its deeply experienced team. The average tenure of employees working in the company's home office is nearly 20 years. This longevity reflects the company's culture of stability, trust, and professional development, allowing DCS to maintain long-term relationships with both clients and consultants. This consistent dedication to quality and expertise has helped DCS remain at the forefront of the IT consulting industry for more than three decades.

The DCS philosophy has always focused on delivering value to clients by providing customized IT consulting services that meet their unique business needs. The company's long-term approach to partnerships allows DCS to understand clients' evolving requirements and develop tailored solutions that deliver measurable success over time.

“We’ve never lost sight of our core tenant: to treat both the company and consultant as a client,” said Sheri Sherrell, President/CEO. “This approach fosters an environment of mutual respect, collaboration, and growth, which is why we’ve been able to build such strong relationships with both our clients and our employees.”

As DCS celebrates this remarkable milestone, the company remains dedicated to its commitment of continuous improvement and pushing the boundaries of what is possible. With a focus on innovation, DCS is excited to embrace the next generation of technologies to help its clients thrive in the ever-evolving digital landscape.

Dynamic Computing Services extends its heartfelt thanks to its clients, consultants, and employees for their unwavering support over the past 35 years and looks forward to the future with excitement and optimism.
